

ZWEMBADCAMERA.NL

**Increase safety with “extra” eyes under water!**

# The ideal underwatercamera

After years of research, testing and improvement we have developed a product that is perfectly suited to complement and expand the current monitoring in swimming pools.

By placing special underwater cameras you get a clearer picture of sites that are difficult to observe for supervisors.

**Zwembadcamera.nl contributes to increasing the safety in your pool!**

In its 10-year existence Zwembadcamera.nl has become a leading installer of underwater cameras.

## **Surveillance under water? It is possible!**

Zwembadcamera.nl offers several options to increase the safety in your pool. In this folder you can read all about it.

## **Why Zwembadcamera.nl?**

- Proper supervision in swimming pools is essential.
- Special underwater cameras are placed at various strategic locations in the pool.
- The images from the cameras are displayed on monitors. These monitors can be mounted at any desired location.
- The compact underwater camera shows bright images of places which are difficult to observe in the pool.
- The applications and installation possibilities are practically unlimited!
- Your pool can stay open to the public during installation because of our special underwater drill!

**“Zwembadcamera.nl contributes to increasing the safety in your pool!”**

### The camera

Our specially designed swimming pool cameras feature a waterproof stainless steel housing with a diameter of 55 mm . The cameras are available with lenses of different opening angles.

This allows us to offer the right pool camera for every application.

We have also developed a pool camera for outdoor pools suitable for quick daylight changes.

### Installation

The cameras can be placed at various strategic locations in the basin. For existing pools we have developed a special drilling system, which allows the cameras to be placed under water. As a result, the pool does not have to be empty during installation and, in most cases , can stay open to the public . A hole is drilled in a tile of the swimming pool. Then the camera is placed in a plastic housing which has a diameter of only 82 mm . Due to this housing , it is possible to place the ball-shaped camera in any desired position. For the finishing touch we have several types of cover rings . This ensures that the camera joins the pool wall seamlessly.

### Wondering how the drilling process works ?

Visit our website: [www.zwembadcamera.nl](http://www.zwembadcamera.nl)

### Display

The camera images can be displayed at the desired location on a monitor, tablet and even on a cellphone. The monitors and tablets , supplied by [Zwembadcamera.nl](http://Zwembadcamera.nl), are specially prepared for the pool climate for a longer life span. The applications and installation possibilities are almost unlimited!

There are plenty of options for displaying the images.

- Rotating images on one monitor
- Multiplexer ( multiple images ) on one monitor
- Multiplexer ( more pictures) on multiple monitors
- HD recorder on one monitor
- HD recorder on multiple monitors
- Recording or playback by means of a computer linked to your network
- Display on a phone
- Display on a tablet

### Drowning detection

[Zwembadcamera.nl](http://Zwembadcamera.nl) also offers the possibility to expand the camera system with a drowning detection system.

The system triggers an alarm when a motionless object is detected on the bottom of the pool.

**Increase  
Safety with  
'extra eyes'  
Under water!**

## Applications

Our cameras even display clear images when there are lots of air bubbles. Therefore the cameras are ideal for placing in the pool at the end of water slides, waterfalls and rapids.

[You can watch a video of this application on www.zwembadcamera.nl](http://www.zwembadcamera.nl). The cameras can also be used in "blind spots" created by pool decorations for example. The underwater cameras are also a good solution for swimming pools where supervision is not mandatory such as in hotel pools. For pools where monitoring is not mandatory, an underwater camera combined with a monitor in a central location, can be the right solution to keep an eye on the swimming guests. This way one can still monitor the pool in a simple but effective way. The camera system is not designed to replace supervisors but only to serve as an extension of the supervisors. In this way, the pool is a lot safer. You use additional "eyes" underwater!

## Reliable, Affordable and Useful

The rules regarding safety in and around pools are increasingly stringent. Mostly this is a drain on the budget because it involves taking staff. This is at the expense of the extras required for the pool to remain attractive to visitors. The camera system Zwembadcamera.nl is a highly effective and affordable solution to increase security. There are plenty of options that can be used with Zwembadcamera.nl. Indoor and outdoor pools, changing rooms, water slides, saunas, rehabilitation pools, whirlpools, rapids, aquariums, industrial greenhouses etc.

**The possibilities are almost unlimited!**

## Many Dutch pools have gone before you !

Among others: Subtropical Caribabad in Gorinchem, Swimming paradise AquafunSportiom Den Bosch, KNRM (Royal Dutch coastguards), Sportfondsenbad De Lis, De Vosse, Center Parcs Zandvoort and many others. References, videos, and many applications can be found on our website.

## Curious?
